

# ELECTRICITY SAVING TIPS

-  1. Install energy saving light bulbs
-  2. Increase your ceiling insulation
-  3. Use energy-intensive appliances during off-peak hours
-  4. Replace old refrigerators or freezers with newer (more energy efficient) versions
-  5. Only fill the kettle with the amount of water needed
-  6. Turn lights off when you're not using them
-  7. Washing clothes at 30° will vastly reduce your electrical consumption
-  8. Set air conditioners to an average of 23° in summer
-  9. Cooking one-pot meals saves both time and energy
-  10. Beware of vampire appliances like TVs and PCs, which use up to 15% of total electricity when in standby mode
